

Construction in Healthcare Training Dates

Glen Burnie, MD

May 13, 2010

July 1, 2010

“**Construction in Healthcare Training**” is a one-day (8-hour) training course designed to present the fundamentals of construction work performed within healthcare settings. The objective of this course is to better familiarize construction trade workers and supervisors as well as healthcare staff who may oversee such construction, with the multidisciplinary requirements unique to a healthcare setting. The course load will include:

- A Review of the Healthcare Setting (principals, departments, objectives, and requirements)
- Risk Assessment Practices
- Basic Applications of Infection Control
- Interim Life Safety Measures
- Med Gas Systems Review
- Specific Healthcare Construction Techniques
- Review of the Applicable Centers for Disease Control and Prevention (CDC) Guidelines Regarding Construction Practices
- Personal Protective Equipment Procedures
- Quality Control and Documentation Protocols

Class presentations include lectures, video presentations, interactive “hands-on” exercises, and resource handouts. A brief multiple-choice examination will be presented at the conclusion of the class, with successful examinees receiving a “Certificate of Achievement.” Classes may be tailored to meet your specific needs.

Who Should Attend?: General & Specialty Contractors, Architects, Engineers, IT Providers, Vendors

Tuition: \$249.00
